Jewel Craft was able to secure enough of this expensive rare stone at a great price to create an eternity band that is over two carats in weight and versatile enough to wear with any jewelry collection or on its own as a beautiful anniversary band. The gemstone was discovered by Manuel d'Souza in the Merelani Hills of Manyara Region in Northern Tanzania in 1967. Tanzanite is only found in Tanzania, in a very small mining area (approximately 7 km long and 2 km wide) near the Mirerani Hills. The gemstone was given the name 'tanzanite' by Tiffany & Co. after Tanzania, the country in which it was discovered. Jewel Craft has 2 ct.s of tanzanite set in a heavy 14kt white gold setting. Special Notes: Our September/October archery elk hunts are conducted on private land ranches in a General Hunting Area. When hunting a general draw area all you need is a general elk license. Which is gotten through the Montana General License Drawing with a March 15th deadline. The bulls found can vary from young brow-tine bulls (rag horns) to mature 320+ P&Y official gross score bull elk. There is a larger population of younger bulls on our ranches in these areas. We have however seen 350+ P&Y bulls while out in the field. We have two styles of hunting we prefer to use during the archery season. The first being spot and stalk with some calling involved. The second is from one of our stationary blinds over water, a wallow, or frequently used game trails. Both have proven to be very successful depending on what the elk are doing at the time of your hunt. Our camps vary from a drive to tent camp, or ranch style house. No additional days may be added. Addition costs: Archery stamp, gratuity, meat processing and taxidermy. This is a 5 day tent camp private land hunt. Hunting options include horseback, ATV, 4x4, spot & stalk, blind hunting and calling.
